### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. Claims 1,6,9 are objected to because of the following informalities:

In claim 1, line 12, the phrase "newly from" does not make sense; perhaps applicant intends to delete "newly".

In claims 6,9, it is unclear as to what is the difference between a chip substrate and at least one thin-film chip; the thin film chip is not clearly defined;

Appropriate correction is required.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyagoshi ("AU" publication on PTO-1449) in view of Tiernan et al. (6,150,809).

Miyagoshi discloses all of the invention except for the use of a giant magnetoresistive or MR as an eddy current sensing element. Miyagoshi

discloses the use of a coil as a pick up (Note whole document). Tiernan is cited to show this feature. Tiernan teaches a giant magnetoresistive element as an eddy current sensing element (note whole document). Consequently, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Miyagoshi to use a giant magnetoresistive element as an eddy current sensor as taught by Tiernan to enhance the sensitivity of the device.

As to claims 3-5, the use of multilayered film of GMR is common place in the related art.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note PTO-892.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jay M. Patidar whose telephone number is 571-272-2265. The examiner can normally be reached on M-Thur 7:00-5:30.
